

EV PRO

SKU: LK4000EV

The Lift King EV Pro Lift brings the latest technology to the Lift King Products line up. The EV Pro comes with an electric winch and state-of-the-art vacuum system designed for removing, installing, lifting, and maneuvering panels up to 500lbs. It works on any panels that can connect to the four vacuum pads.

The EV Pro has safety features on the vacuum system such as a gauge to ensure a safe and solid connection and an alarm that will sound upon a loss of vacuum pressure.

The electric winch comes with a hand remote so the technician can make height adjustments while inspecting the positioning of the items being lifted. The main connection point is fully

adjustable to accommodate several designs. This is a great option when lifting all types of products within the weight and size limitations.

Unlike the Lift King Main Component, the EV Pro does not accommodate any other attachments. This lift is not the same as the Lift King Main Component. This lift is designed exclusively for the included vacuum system.

The Lift King EV Pro comes with a durable powder coat finish, takes up minimal floor space when stored, and comes with swivel brake casters. Like all Lift King products, it is built in the USA and is heavy duty for longevity.
